Prepared?**

Heavy Rains and Floods

Courtesy of Sutcliffe & Co. Insurance Brokers

According to the Environment Agency (EA), the Scottish Environment Protection Agency (SEPA) and Northern Ireland's Rivers Agency, there are over 5 million properties in the United Kingdom at risk for flooding. Forecasting floods largely depends on the type and nature of the events that trigger them, such as when and where a storm will hit or how much rain it will bring. Short periods of intense rainfall can create flash floods, in which the rain falls so fast that the underlying ground cannot drain it away fast enough. Roads can become like rivers and sweep away cars, and buildings can be flooded. These are particularly dangerous as there is very little warning between the rain falling and the flash flood occurring. Longer periods of heavy, widespread rain and storm surges can cause coastal flooding.

Be aware of flood hazards no matter where you live or work, but especially if you live or work in low-lying areas, near bodies of water or downstream from a dam. Even very small streams, creeks or low-lying ground that appears harmless in dry weather can flood.

Met Office Flood Warnings

The United Kingdom's National Weather Service, the Met Office, provides up-to-date weather advisories and warns the public of severe or hazardous weather through its National Severe Weather Warning Service. Warnings are given a colour (Green, Yellow, Amber or Red) based on the combination of both the likelihood of the severe weather event occurring and the impact the weather conditions may have. Make sure you check your local weather forecast to find out whether the Met Office has released any warnings for your area. You can also find the latest warnings at www.metoffice.gov.uk. You can also get advice and information 24 hours a day from the EA, SEPA and local authorities during flood emergencies by calling Floodline at 0345 988 1188 for England, Scotland and Wales, or the Northern Ireland flooding incident line at 0300 2000 100.

The content of this document is of general interest only and not intended to apply to specific circumstances. It does not purport to be a comprehensive analysis of all matters relevant to its subject matter. It does not address all potential compliance issues with UK, EU or any other regulations. The content should not, therefore, be regarded as constituting legal advice and not be relied upon as such. It should not be used, adopted or modified without competent legal advice or legal opinion. In relation to any particular problem which they may have, readers are advised to seek specific advice. The Met Office provides the following examples of what to expect during heavy rains and floods.

<p>Very Low Threat (Green)</p>	<ul style="list-style-type: none"> • Some flooding of low-lying fields, recreational land and car parks but little or no disruption to travel. • Wet road surfaces and the possibility of ponding water, leading to difficult driving conditions. • Take extra care when driving in affected areas.
<p>Low Threat (Yellow)</p>	<ul style="list-style-type: none"> • Localised flooding of low lying fields, recreational land and car parks. • Flooding of a small number of homes and businesses. • Wet road surfaces and the possibility of ponding water, especially in known trouble spots. • Local disruption to travel—expect longer journey times. • Water on roads—drive according to the conditions encountered.
<p>Medium Threat (Amber)</p>	<ul style="list-style-type: none"> • Some flooding of homes, businesses and transport links possible. • Disruption to travel likely. • Disruption to gas, electricity, water supplies and telecoms. • Some evacuations may be required. Be prepared to protect yourself and your property.
<p>High Threat (Red)</p>	<ul style="list-style-type: none"> • Widespread flooding of property. • Severe disruption to travel. • Loss of gas, electricity, water supplies. • Significant disruption to communities. • Evacuation expected. • Significant risk to life. • Take action to protect yourself and follow the advice of emergency services.

If the Met Office issues a warning for heavy rain and flooding in your location, make sure you are prepared. Use the following tips and hints to help ensure your safety if heavy rains and flooding are prevalent.

Before a Flood

What would you do if your property or business were flooded? Are you prepared? Even if you feel you are in an area with a low risk of flooding, remember that anywhere it rains, it can flood. Just because you haven't experienced a flood in the past doesn't mean you won't in the future. Flood risk isn't just based on history, it is also based on a number of factors, including rainfall, topography, flood-control measures, river-flow and tidal-surge data and changes due to new construction and development.

Flood maps have been created to show the flood risk for your community. For more information about your flood risk and to view flood maps for your area, visit these websites:

- England: www.environment-agency.gov.uk/flood
- Wales: <https://naturalresources.wales/flooding>
- Scotland: www.sepa.org.uk/flooding
- Northern Ireland: www.nidirect.gov.uk

To prepare for a flood, you should:

- Sign up for advance flood warnings for all of the United Kingdom by clicking [here](#).
- Create a personal flood plan. Download a template [here](#).
- Prepare a flood kit with essential items such as your insurance documents, a torch, a wind-up or battery-powered radio, warm clothing and blankets, a first aid kit and any prescription medicine, bottled water and non-perishable foods.
- Prepare your property for flooding.
 - Elevate the furnace, water heater and electric panel if you live in an area that has a high flood risk.
 - Protect your valuables and expensive electronics by elevating or removing them.
 - Consider installing 'check valves' to prevent floodwater from backing up into the drains.
 - If feasible, construct barriers to stop floodwater from entering the building and seal walls in basements with waterproofing compounds.

During a Flood

If a flood is likely in your area:

- Listen to the radio or television for more information.
 - Be aware that flash flooding can occur. If there is any possibility of a flash flood, move immediately to higher ground. Do not wait for instructions to move.
-

- Be aware of streams, drainage channels and other areas known to flood suddenly. Flash floods can occur in these areas with or without typical warnings such as rain clouds or heavy rain.
- Turn off utilities at the main switches or valves. Disconnect electrical appliances. Do not touch electrical equipment if you are wet or standing in water.
- Do not walk through moving water. Fifteen centimetres of moving water can knock over an adult. If you have to walk in water, walk where the water is not moving. Use a stick to check the firmness of the ground in front of you.
- Do not drive into flooded areas. If floodwaters rise around your car, abandon the car and move to higher ground if you can do so safely. You and the vehicle can be swept away in just 0.6 metres of moving water.
- Gather essential items and move to a higher, safer area.
- Listen to the advice of emergency services and evacuate if told to do so.

After a Flood

Although floodwaters may be down in some areas, many dangers still exist. Here are some things to remember:

- Use local alerts and warning systems to get information and expert advice as soon as available. Play it safe. Additional flooding or flash floods can occur.
 - Find out from emergency services if it is safe to re-enter your property.
 - Avoid moving water.
 - Stay away from damaged areas unless your assistance has been specifically requested by police, fire or a relief organisation.
 - Stay off the roads and out of the way as emergency workers assist people in flooded areas.
 - Use extreme caution when re-entering buildings—there may be contamination and hidden damage, particularly in the foundations.
 - Call your buildings and contents insurance companies.
 - Take photos of the damage to your property.
 - Flood debris may hide animals or broken bottles, and it's also slippery. Avoid walking or driving through it.
 - If you must walk or drive in areas that have been flooded:
 - Stay on firm ground. Standing water may be electrically charged from underground power lines.
 - Take another route if you come upon a barricade or flooded road. Roads may still be closed because they have been damaged or are covered by water. Barricades have been placed for your protection.
 - Remember that flooding may have caused familiar places to change. Floodwaters often erode roads and walkways.
-

- Be aware of areas where floodwaters have receded. Roads may have weakened and could collapse under the weight of a car.

Staying Healthy

A flood can cause physical hazards and emotional stress. You need to look after yourself and those around you as you focus on clean-up and repair.

- Avoid floodwaters—water may be contaminated by oil, petrol or raw sewage.
- Service damaged septic tanks and anything else containing raw sewage as soon as possible. Damaged sewer systems are serious health hazards.
- Listen for news reports to learn whether the community's water supply is safe to drink.
- Clean and disinfect everything that got wet. Mud left from floodwaters can contain sewage and chemicals.
- Keep a manageable schedule. Make a list and do jobs one at a time.

Stay safe when severe weather strikes by being prepared and checking weather forecasts and warnings.

Preparing Your Business for Flooding

Floods can sometimes be predictable. For example, charting the habitual swelling of the tides establishes typical water levels and indicates when coastal areas might be prone to flooding. However, more often than not, floods can arise without warning—rivers, lakes or the sea can overrun, swamp defences and surge through the surrounding areas.

The fickle nature of UK weather only exacerbates the unpredictability of floods, and with so many areas susceptible to flooding, one unexpected severe storm can trigger widespread, damaging floods. In England and Wales alone, more than 5 million properties—as many as 1 in 6—are at risk of flooding. One in 14 Scottish properties and 1 in 20 Northern Ireland properties are also at risk. With these odds, there is a good chance that one of these properties at risk belongs to you.

Neglecting to prepare your property for possible flooding can sink your business. Stay afloat with solid preparation and a thorough flood plan.

Preparing for Floods

It is impossible to completely flood-proof your property, but flood preparation can lower your business' risk of damage and reduce business interruptions.

Begin your preparation by consulting your area's flood risk map. The Environment Agency (EA) publishes maps for England [here](#), for Wales [here](#), for Scotland [here](#), and for Northern Ireland [here](#). The EA makes three types of maps, each addressing a different flood hazard: surface water, reservoirs, rivers and the sea.

For areas of high flood risk, the EA offers Floodline Warnings Direct, a free service that provides flood warnings via telephone, mobile, email, SMS text messaging and fax. Sign up [here](#).

The Environment Agency estimates that with proper flood preparation, most businesses can save 20 to 90 per cent on the cost of lost stock due to flooding.

Once you have assessed your risk, it is time to prepare your business accordingly. Buy and install products in advance that fortify your property against water. Consider the following precautions against flooding when building or remodelling:

- Purchase flood boards for your doors that you can install when flooding is imminent.
- Seal floors to prevent water seeping up through the ground.
- Fit non-return valves to drains and both inlet and outlet water pipes.
- Install high shelving where you can store items when flooding is inevitable.
- Raise electrical sockets, fuse boxes and wiring at least 1.5 metres above the floor.

Preparing Your Business for Flooding

- Keep a pump in the basement or lowest level to remove flood water.

In combination with your business' physical flood prevention measures, adopt the organisational precautions listed below for more comprehensive flood preparation:

- Compile a list of useful telephone numbers, including Floodline, your local authority and your insurer.
- Learn how to shut off your gas, electricity and water.
- Develop a flood contingency plan with suppliers and clients.
- Designate an emergency flood contact.
- Train your employees in correct flood safety procedures, and establish a safe meeting place in case you need to evacuate.
- Stockpile useful materials like plastic sheeting, plywood, sandbags, nails, hammers and shovels.

Creating a Flood Plan

A flood plan is a written document outlining how your business will respond to a flood. Store your business' flood plan in an easily accessible location—everyone should know where it is at all times. All flood plans should include the following:

- A list of important contact information, including Floodline (0845 988 1188) and any additional flood warning systems, building services, suppliers and evacuation contacts
- A map showing locations of supplies, protective materials and shut-off points
- An outline of basic strategies for protecting property, ensuring health and safety, minimising business disruption and facilitating recovery
- Procedural checklists for staff to use during a flood

Review and update your plan annually. Flood risks and procedures can change, so make sure your business is prepared.

Staying Prepared

Flood insurance is the ultimate preparation for your business. Check your commercial cover to make sure you are covered for flood damage. Flooding poses a substantial—but not ruinous—threat to UK businesses. The insurance professionals at Sutcliffe & Co. Insurance Brokers are poised to help fortify your property. Rely on us to provide more flood-preparation materials and help keep your business from going under.

Restoring Your Business After a Flood

Floods can be miserable ordeals, even with extensive preparation. They can spring up with little to no warning and saddle you with the responsibility of a lengthy, expensive restoration period. Your business could be underwater in a flash, and you could be faced with mounting repair bills and extended interruption to your business.

But floods can also be regenerative. Large-scale damage to your business is an opportunity to rebuild and minimise potential damage and disruption that could be caused by future floods. If your business has sustained flood damage, do not panic. Think of it as a chance to fortify your business against future flood damage rather than nothing but a ruinous misfortune.

Cleaning Up After a Flood

Once flood waters start to recede, you may want to immediately get your hands dirty and start the clean-up effort. Fight that urge. Never re-enter premises until you are absolutely sure they are safe. Floods leave a myriad of hazards in their wake, such as exposed wires, weakened buildings and contaminated water. Your first priority should be the safety of yourself, your employees and anyone else who might enter or pass near your business.

Local councils and insurers often visit flood-damaged premises and offer guidance after flood waters start to retreat. Until then, use extreme caution when visiting your business. Before entering your flood-damaged building, heed the following advice:

- Notify your insurer. Take pictures of contents and damage for your insurer—the more the better—but only if it is safe to do so.
- Turn off your building's gas, electricity and any fuel taps. Never touch sources of electricity when standing in flood water.
- Check for structural damage before entering the building. Do not enter if there is any chance it may collapse.
- Assume that all water-damaged structures are unstable until proven otherwise.
- Treat all stairs, floors, roofs and overhangs as unsafe until they are inspected.

Floods can be miserable ordeals, but rebuilding afterwards can provide an opportunity to minimise potential damage and disruption that could be caused by future floods.

Your insurer will send a loss adjuster and other specialists to assess your business' damage. After ensuring that your property is stable, it is time to get dirty. When beginning clean-up efforts, follow the guidance listed below:

- Ensure you and your employees follow every health and safety precaution, such as wearing boots, rubber gloves and other personal protective clothing.
- Use caution when handling debris—it may be contaminated or harbour unseen sharp objects.

Restoring Your Business After a Flood

- Dispose of equipment only after notifying your insurer.
- Disinfect your property with ordinary household cleaners, but follow the manufacturer's directions to ensure you are disinfecting properly. Let cleaned surfaces dry completely.
- Open a window and leave the building if you smell gas or hear blowing or hissing—these may be signs of a gas leak.
- Operate electrical equipment only if the ground is dry—never operate electrical equipment that is in or near water.
- Clean any water taps that may have been submerged in contaminated flood water with a bleach solution. Let the water run for 30 seconds prior to using it.
- Drain water away in stages to avoid discrepancies between the water pressure inside and outside your building.
- Shovel mud out in stages so the pressure inside and outside remains equal. Remove the rest of the mud with a hose, but make sure it is not a high-pressure one—these hoses can blast contaminants into the air.
- Use a pump and generator to remove water. Position the generator outside in the open air if it produces carbon monoxide. Only pump out water once the flood levels outside your property are lower than inside.
- Keep windows and doors open, weather permitting, to expedite drying, but never sacrifice building security.
- Dry your building using a combination of fans, industrial heaters and dehumidifiers. Your insurer may provide these tools.
- Leave central heating on at 20 degrees Celsius or above to encourage drying if it is safe.

Upgrading After a Flood

Make the most out of an unfortunate situation by using your flood damage as an opportunity to repair your property with flood-resistant products. Consider installing the following flood-resistant precautions:

- **Pumps and pump systems** sit below the ground floor to remove water which enters through the ground.
- **Flood skirts** are barriers erected around any potential inlet for water.
- **One-way valves** are fitted to water pipes to prevent water backing up into your property.
- **Water-resistant sealants** refer to a wide variety of sealants—you can use them all over your property.
- **Plastic fittings** in kitchen or lavatory areas are more durable than reconstituted wood, which disintegrates in a flood.
- **Electrical sockets, fuse boxes and wiring** should be raised at least 1.5 metres above the floor level to prevent water damage.
- **High shelving** is a convenient option for ensuring you have an area above flood water to store valuable items.

No matter what you install, the ultimate preparation for a flood is proper insurance. Remember that your damaged stock and premises will not be the only setback you suffer from a flood—interruption to your business' continuity can be fatal. Purchase a comprehensive policy that accounts for business interruption and is tailored to your specific industry and location. Taking risk-reduction measures may help cut down your premium or excess.

Contact the insurance professionals at Sutcliffe & Co. Insurance Brokers for more information about keeping your business afloat when faced with flood damage.
